

QUALITY POLICY

SolarGik develops, produces, installs, and maintains smart photovoltaic (PV) tracker solutions that are modular, configurable, lightweight, and easy to install and maintain, which provide 20-25% more energy production than fixed-tilt panels.

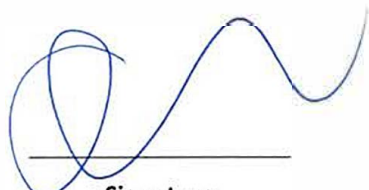

In consideration of energy production impacts on environment and the advantages of renewable energy, the company defines its mission as unlocking the full potential of solar energy by solving the industry's biggest challenges in this field, mainly: intermittency, reliability, predictability and flexible production and distribution.

Most of our installations also save land usage by utilizing rooftops, dual use of agricultural land and greenhouses.

Our solution integrates the abovementioned features, providing additional value on both environmental and financial levels.

SolarGik operates in accordance with relevant standards and regulations, on product level (such as UL, CE, etc.) as well as process based, while maintaining an effective quality management system in compliance with the requirements of ISO 9001:2015 and ISO 90003:2018. The company's management is committed to supporting this system and providing the required resources.

All employees are expected to share the responsibility for meeting the required quality level, achieving the quality goals defined by the management, and exceeding customers' expectations, as part of the company's continuous improvement efforts.
